

SOULEIMA GARA

UNITY • SDK & NATIVE MOBILE ENGINEER

garasouleima01@gmail.com • Tunisia, open to remote • [LinkedIn](#) • [portfolio](#)

PROFILE

Unity developer with seven years of experience building games, AR/VR applications, and cross-platform software. For the past four years at ZBD, I've focused on SDK development, native mobile integrations, and security infrastructure, working as part of the engineering team developing the rewards SDK used by game studios to pay players in Bitcoin. My work spans the Unity SDK, native iOS and Android plugins, hardware-backed device attestation, embedded web technologies, and developer documentation. Outside of ZBD, I build VR and mobile training applications, including a dialysis simulator used by medical students.

SKILLS

Languages: C#, C++, Kotlin, Swift, TypeScript, SQL

Unity & XR: Unity 2D/3D, XR, multiplayer, native plugins. Unreal Engine 4, Meta Quest, ARCore, ARKit, Vuforia

Native mobile: Android and iOS plugins in Kotlin and Swift, Chromium Embedded Framework, WebView bridges, deep linking

Security: Apple App Attest, Android Key Attestation with StrongBox, Secure Enclave, device fingerprinting

Payments & identity: Plaid, Tink, Onfido (KYC), Bitcoin Lightning Network, Unity IAP

Backend & web: REST endpoints in TypeScript, Next.js, React, Firebase, PlayFab, Photon, Beamable

EXPERIENCE

Unity Developer | ZEBEDEE (ZBD)

Remote, for a Hoboken, United States company | Sep 2022 – Present

ZBD builds a rewards SDK that lets game studios reward players in Bitcoin. I work across the Unity SDK, the native iOS and Android plugins, and the embedded web application used for rewards and cashouts.

- Developed and maintained native Android (Kotlin) and iOS (Swift) components for the SDK, including hardware-backed device attestation, deep linking, crash reporting, and platform integrations.
- Built a desktop WebView plugin for Unity in C++ using Chromium Embedded Framework, allowing the rewards web app to run on Windows and macOS. Added two-way communication between Unity and the web app, later adapted for VR.
- Wrote the official Earn SDK documentation at docs.zbdpay.com, including tutorials and hardware attestation guides covering Google Play Integrity and iOS DeviceCheck. Supported partner studios integrating the SDK by debugging build issues and resolving production problems.
- Implemented bank cashout features using Plaid (US), Tink (Europe), and Onfido for identity verification. Also developed part of the embedded rewards web app, including withdrawal flows, multi-currency support, and communication with Unity.
- Added TypeScript endpoints to the Earn Service and built features for the Next.js developer dashboard, including project configuration, wallet management, and rewards customization.
- Developed an Overwolf overlay bringing ZBD rewards to PC games such as Counter-Strike and Valorant without requiring native SDK integration.
- Built Escape from Cat Mountain, ZBD's demo game showcasing the complete Earn SDK integration, including rewards, cashouts, and device attestation.
- Shipped gameplay content for Lightning Crash and SARUTOBI, including new levels, achievements, rewarded ads, and in-app purchases.
- Expanded a kart racing prototype into a multiplayer demo with AI opponents, controller support, and Bitcoin Lightning rewards. Also prototyped Windows device attestation for the demo, which was showcased by ZBD at a conference.

Unity Developer (freelance) | UNDERLIT STUDIO

Tunisia | May 2021 – Present

- Built a VR civic education app for Tunisia's electoral authority (ISIE) on Meta Quest 3: one app with four scenes, each a different voting scenario, with documentation in French, English and Arabic.
- Made a 3D serious game for dialysis training on Android and iOS, later extended with a VR version, which a hospital uses to train and assess medical students.
- Built a web-based virtual fair platform with real-time chat and WebRTC video conferencing, letting remote visitors attend events and exchange information.
- Designed and delivered VR and AR applications for healthcare, education, cultural heritage, and industrial training.
- Built a controller app for a theatre installation that plays several kinds of 360° video and keeps them synchronized across many headsets at once.

Unity & Unreal Engine Developer | 3D WAVE

Sousse, Tunisia | Oct 2019 – Aug 2022

- Took Unity 2D/3D projects for mobile and WebGL through every stage: analysis, design, development, testing and release.
- Built AR applications for Android and iOS with ARCore, ARKit and Vuforia.
- Created a VR game for Oculus Quest 2 in Unreal Engine 4 using Blueprints, with an NPC guide and in-game quizzes.
- Designed and implemented interfaces (UI/UX) and modernized existing software to improve both interface and performance.

KEY PROJECTS

ZBD Earn SDK | ZBD

The Unity rewards SDK that game studios integrate to reward players in Bitcoin. Contributed to the Unity SDK, native iOS and Android plugins, hardware-backed device attestation, embedded web technologies, bank payout integrations, and developer documentation.

Technologies: Unity, C#, Kotlin, Swift, C++, TypeScript.

Dialysis Training Simulator | UNDERLIT STUDIO

Cross-platform serious game for Android, iOS, and VR that trains and assesses medical students in dialysis procedures. Includes Firebase authentication, progress tracking, feedback collection, and an administration dashboard for reviewing student performance, searching records, and exporting results.

Technologies: Unity, C#, Firebase, Meta Quest, Android, iOS.

Theatre Controller | UNDERLIT STUDIO

Controller application for a theatre installation, synchronizing multiple Meta Quest headsets using Mirror networking while managing synchronized playback of several 360° videos during live performances.

Technologies: Unity, C#, Mirror, Firebase Authentication, Firebase Realtime Database, Android, iOS, Meta Quest.

Katara Treasure Hunt | 3D WAVE

Location-based cross-platform quiz game featuring twelve interactive quizzes triggered by Estimote beacons. Built a companion administration application for creating and updating quizzes, questions, images, and leaderboards in real time using Firebase.

Technologies: Unity, C#, Firebase, Mapbox, Estimote.

Dürr Technik AR | 3D WAVE

Industrial AR application allowing customers to explore air compressors through exploded views, interactive animations, and full 360° product visualization. Client: Dürr Technik GmbH & Co. KG, Germany.

Technologies: Unity, C#, Vuforia.

EDUCATION

Master's Degree in Computer Science | ISITcom

Higher Institute of Computer Science and Communication Technologies, Hammam Sousse, Tunisia | 2017 – 2019

Bachelor's Degree in Computer Science | ISITcom

Higher Institute of Computer Science and Communication Technologies, Hammam Sousse, Tunisia | 2014 – 2017
